9:30 AM

Professor Reese (Whale)

Topics:

1. Yesterday, the three major indices extended their subdued rebound. Keep a close watch on the MA25 moving average as a critical support level.
2. Bitcoin is approaching the key \$100,000 psychological threshold. Is there still room to buy?
3. Could EVW tokens have significant upside potential in the future?

Good morning, team! I'm Milton Reese, your old friend. Today is our weekly Happy Raffle Day, which is not only a feast with rich rewards, but also a moment for us to celebrate our growth and harvest together! As long as you participate, you will have a chance to win cash prizes ranging from US\$25 to US\$10,000. These rewards not only symbolize your efforts, but also represent our recognition and encouragement for you. Happy Raffle Day reminds us that every persistence and dedication will pave a more glorious road for our future. Friends, let us embrace this luck together, celebrate the results of our efforts, and move towards a more glorious tomorrow together! May God bless every friend and make today another highlight moment after our hard work!

The Asset Multiplication Plan officially launched yesterday! This initiative is designed to help participants achieve a 300% return on total assets, putting your wealth growth into high gear. Have you signed up yet? What kind of breakthroughs do you hope to achieve through this program?

School

EVW Business

We hold high expectations for this plan, hoping it will not only serve as a crucial step in expanding your wealth but also act as a launchpad for your personal growth and transformation.

Given the limited spots available, participants will be selected based on a combination of time priority and performance in study note submissions and quizzes. Seeing so many of you actively participate in the Vanguard AI 4.0 beta testing, diligently study the materials, and submit high-quality notes has been truly inspiring. Your enthusiasm and perseverance not only showcase an extraordinary commitment to learning but also reflect your confidence and determination to succeed.

This pursuit of excellence is the cornerstone of achieving financial freedom. Be sure to submit all necessary materials on time and maintain a positive learning attitude. Together, we'll not only pursue wealth multiplication but also the simultaneous growth of knowledge and wisdom.

If you've already accumulated a certain level of wealth, don't settle for the status quo. Now is the time to reorganize your mindset, align with our strategy, and aim for even higher goals! Regardless of your starting point, continuous learning and adapting to market dynamics remain the keys to success.

Let's move forward hand-in-hand, overcome challenges, and create even greater milestones together! Act now to secure your spot, join the Asset Multiplication Plan, and step boldly toward the goal of financial freedom!

In the Asset Multiplication Plan, we are excited to introduce the Vanguard AI 4.0 trading system, valued at over \$100 million, for the first time. This advanced tool is specifically designed for investors, providing precise market insights and strategic support to accelerate your journey toward financial freedom. This is not merely an investment program—it is an extraordinary journey filled with challenges and opportunities, offering a unique chance to achieve personal breakthroughs and make your dreams a reality. Whether you are an experienced investor or just starting out, no matter your current financial standing, as long as you are committed to learning and taking action, the doors to success will always remain open to you! Participants who actively engage in the Vanguard AI 4.0 beta testing, demonstrate focus and execution through diligent study, and submit high-quality study notes will be given priority registration. As an additional reward, participants will also have the opportunity to earn EVW Business School tokens and gain early access to next week's Position-Building Plan, which targets a potential return of up to 80%. With these hands-on opportunities and comprehensive guidance, you'll be equipped to seize every golden market opportunity with precision. Spots are limited, so please contact my assistant immediately to secure your place and receive detailed registration instructions. Don't hesitate—join us today to reach new heights in investment with Vanguard AI 4.0. Take the fast track to realizing your dreams! May God bless each of us, granting us strength and wisdom as we embark on this journey to fulfill our aspirations.

The Asset Multiplication Plan was launched with the goal of enhancing brand awareness, attracting outstanding individuals to join our growing community, rapidly expanding the

**EVW Business**

**School**

user base and asset scale of EVW Business School, and laying a solid foundation for the successful submission of a Bitcoin Spot ETF application to the SEC in April 2025. To ensure that every EVW member successfully completes the Asset Multiplication Plan, participants will have the exclusive opportunity to use the Vanguard AI 4.0 quantitative trading system for free. Valued at over \$100 million, this cutting-edge system boasts a transaction success rate exceeding 95%. We are confident that by combining superior tools with scientifically designed strategies, every participant can achieve a remarkable 300% return on total assets.

However, as the saying goes, "There is no free lunch in the world," and rewards are always accompanied by effort. If you align with our goals and mission, we invite you to voluntarily contribute 15% of your profits to the Business School Community Fund after successfully achieving the profit target. This fund will be dedicated to promoting community collaboration, talent development, and social welfare, driving the sustained growth of the business school while creating greater value for society. As we all know, a thriving community relies on effective operational support. Our business school team requires resources to continuously enhance services and expand the scale of public welfare projects. This model represents more than just the sharing of wealth—it embodies the transmission of value. It ensures that the efforts and success of each participant contribute meaningfully to the community and society at large. If you share our vision—emphasizing personal wealth growth while striving for societal progress—we sincerely invite you to join the Asset Multiplication Plan. This is not just an opportunity to achieve your financial goals; it is a journey to make a positive impact on society. Join us today, and let every one of your investments become not only a catalyst for wealth growth but also a bridge for spreading love and hope!

Some specific details are as follows: To ensure the orderly implementation of the Asset Multiplication Plan and support the long-term sustainable development of the business school, participants will voluntarily contribute 15% of their profits to the Business School Community Fund upon the plan's conclusion. The fund will be allocated as follows to promote community collaboration, talent development, and social welfare:

30%: Allocated as rewards for group leaders, acknowledging their hard work and guidance.

40%: Dedicated to supporting talented traders, helping them fully realize their potential.

10%: Donated to charitable causes, reflecting the business school community's active commitment to social responsibility.

20%: Used to organize community gatherings and events to foster stronger connections among members. For instance, when Vanguard AI 4.0 launches next year, we will celebrate this milestone with a series of vibrant activities.

This initiative reflects the spirit of sharing and mutual success, enabling us to achieve personal growth while empowering others, creating positive impacts, and celebrating collective achievements through collaboration. Together, let us build a future filled with prosperity, connection, and purpose.

Yesterday, the three major U.S. stock indices displayed a strong rebound at the critical support level of MA25. The Philadelphia Semiconductor Index and the Russell 2000 Small Cap Index also experienced a concurrent rise, which not only highlights the technical strength of the bulls but also indicates that the market is striving to establish a new equilibrium. Simultaneously, the VIX panic index failed to break through the MA62 moving average, suggesting that investor sentiment is beginning to stabilize. However, it is important to note that the diminished expectations for Fed rate cuts, coupled with escalating geopolitical tensions, are introducing greater complexity and uncertainty into market dynamics.

As the Bible says, "Hard days will come, but those who hold onto their faith will see the light of dawn." While the current market volatility may cause unease, it presents a valuable opportunity to reassess and reposition. The pullback offers investors a chance to acquire high-quality assets at more favorable prices, and the long-term upward trend of the market remains a belief worth holding onto. In the face of uncertainty, we need patience and wisdom, approaching short-term fluctuations with rationality and discipline, transforming challenges into opportunities. In such an environment, while technical analysis is important, psychological resilience and faith are even more critical. Let us seize every opportunity, navigate the market's rhythm with wisdom and action, and find true certainty amidst uncertainty.

Through recent multiple field tests of Vanguard AI 4.0, we have achieved outstanding results. Whether it's IBIT launched by Smart Investment Strategy Plan No. 1 or SNOW from Smart Investment Strategy Plan No. 2, the market has provided us with very significant short-term returns, fully validating the exceptional performance of the Vanguard AI 4.0 trading system in precise analysis. Although Smart Investment Strategy Plan No. 3 is currently showing steady performance, this marks just the beginning of the strategic layout, and we must remain patient, waiting for better opportunities to realize returns. Drawing on the successful experiences of previous smart investment strategy plans, we will launch the much-anticipated Smart Investment Strategy Plan No. 4 next week. This plan will focus on mid-term investments, targeting a return rate of over 80% and aiming to deeply explore mid-term market trends. By combining the precise analysis of the Vanguard AI 4.0 system, we will provide investors with a stable and efficient layout strategy, striving to achieve greater returns in the mid-term market.

It's worth mentioning that those who have signed up for the Asset Multiplication Plan will have priority access and will be the first to receive the details of the strategy. This is not only a rare opportunity for wealth growth, but also a chance to further experience the powerful capabilities of Vanguard AI 4.0. Whether you're a first-time participant or a beneficiary of previous smart investment strategy plans, this opportunity is one you don't want to miss. Let's look forward to the limitless possibilities that Smart Investment Strategy Plan No. 4 will bring!

On Wednesday, Nvidia reported strong third-quarter results, reaffirming its unshakable

**EVW Business**

**School**

dominance in the artificial intelligence boom, and issued confident earnings guidance. However, compared to the rapid growth of previous quarters, the revenue growth rate has slowed this quarter, causing the stock price to pull back after an initial surge. From a technical perspective, as shown in the chart below, Nvidia remains in a bullish trend, but the upside potential is now more limited. Our recent entry cost was around \$142, and at the current price level, investors can decide when to take profits based on their own expectations. At the same time, to optimize the investment portfolio, it may be wiser to allocate more energy and funds to assets with higher growth potential and profit margins. This strategy will not only improve investment efficiency but also help seize new opportunities in the market.

As shown in the chart below, the chart represents the daily candlestick line of SNOW. Yesterday, SNOW delivered an outstanding performance, bringing us over 30% profit in just one trading day. For those who adopted options strategies, the returns were even more impressive. In response to many private messages asking, "I've made so much profit, what should I do next?", the strategy is actually very clear.

As seen in the chart, SNOW successfully broke through the key resistance level of \$165-168 yesterday, driven by positive earnings news. This resistance level has now become the most important support level. If the stock can stay above this support level in the short term, there is potential for further upside, with the target possibly reaching \$200. However, if the support level of \$165-168 is lost, the stock could face a deeper correction. Therefore, based on different investment strategies, the following suggestions are offered:

**Conservative Investors:** You may choose to take profits at the current level, locking in the substantial gains you've already made, and patiently wait for the launch of Smart Investment Strategy Plan No. 4 next week.

**Aggressive Investors:** You may continue holding, but it's crucial to monitor the \$165-168 support level closely. If the support holds, keep holding to pursue greater returns. If the support is breached, it's advisable to take profits and avoid potential losses. No matter which strategy you choose, remember that the core of investing is adjusting your positions based on your risk tolerance and objectives, ensuring that each move is more rational and efficient!

So, what about the Smart Investment Strategy Plan No. 3 that we laid out this week? Yesterday, I shared some core principles of investment: investing must be guided by strategic thinking, followed by tactical thinking to maximize returns. This is especially crucial because if the strategic direction of an investment is wrong, no matter how excellent the tactics are, it will only speed up the journey to failure. However, if the

strategy is right, even if there are flaws in the tactics, it may still lead to unexpectedly significant rewards.

Investment is not merely about chasing short-term fluctuations; it requires adopting a broader perspective and crafting a clear strategic plan based on deep insights into trends, sectors, logic, and data. Only when the strategy is correct can we maintain our composure during market fluctuations and avoid being swayed by short-term emotions. This is why I always emphasize: doing the right thing is 100 times more important than simply doing things right!

Market changes may cause confusion, but those who stick to the right strategy and have a deep understanding of market logic will truly stand out from the competition, confidently seize opportunities, and achieve long-term success. I hope everyone can view investment from a broader perspective and approach every challenge and opportunity with unwavering belief!

As the world's largest cryptocurrency trading platform, COIN's trend is highly correlated with Bitcoin. Currently, Bitcoin continues to set new all-time highs, establishing a strong foundation for the bull market. Therefore, COIN's recent consolidation at higher levels is more about the market building up energy and preparing for the next wave of movement. As shown in the chart, COIN has now retraced to near its previous highs. Moving forward, it's crucial to monitor the key support level at \$280 and the short-term resistance at \$342. If the price breaks through \$342 with increased volume in the short term, it is expected to open up more room for growth. From a technical perspective, COIN is showing a strong bullish trend overall.

Although COIN experienced significant fluctuations yesterday, which may have led to some temporary small losses for certain investors, this is a normal fluctuation within a bull market, and there's no need to worry too much! As Bitcoin continues to set new highs, COIN is likely to experience a strong breakout and move towards new price levels. For those who have already invested in COIN, my advice is: as we emphasized in the SNOW trade, patiently wait for opportunities following the pullback. The core principle of the market is that it rewards those investors who are patient and have conviction. With precise strategies and clear goals, we will continue to be guided towards securing substantial returns in the crypto market. Please stay focused and embrace even greater success ahead!

#### Crypto Market:

Yesterday marked the unblocking day for the Business School token, and I took this opportunity to review its overall situation with you, including its price trends and market performance. Many of you have noticed that the token's current momentum is very strong and is approaching the point of breaking through its previous high. This performance reminds me of Bitcoin's upward surge after it broke through the \$73,797 resistance level. At that time, Bitcoin broke through the resistance with momentum and continued to rise, and now it is approaching the significant milestone of \$100,000. As a result, many of you have asked me about the future value and appreciation potential of the EVW token.

First and foremost, I would like to sincerely thank each and every one of you who has shown enthusiasm and trust in our project. Since the listing of the EVW token, we have closely monitored market performance and feedback, and your support has not only given us greater confidence, but also become the core driving force behind the ongoing

development of the project. The EVW token is not just a digital currency; it is also a testament to the Business School's continuous growth and breakthroughs.

After seeing the daily chart of the token, many friends excitedly messaged me asking, "Professor, is this token about to skyrocket? Should I buy some?" My response is: It is definitely worth paying attention to! Since the ban was lifted, the EVW token has shown strong upward momentum. As shown in the chart below, from yesterday until now, the EVW token has increased by over 15%, with market interest and trading activity continuing to rise. Everything has its time, and all things in life follow a rhythm. I am confident that, through our collective efforts, the EVW token will unlock even greater potential and value in the future.

Technical Analysis: From the daily chart above, EVW has formed a very stable N-shaped upward pattern. Not only has it successfully broken through the previous high, but it has also confirmed this breakout with a pullback. This trend is not only steady but also emits a strong bullish signal, indicating that market confidence in EVW is continuing to grow. From yesterday until now, EVW has risen by over 15%.

Do you remember how MSTR performed after it broke through its previous high? It surged from 210 to over 500, an increase of more than 100%. This is the explosive potential that strong trend assets often have once they break through key levels. Now, what about EVW? Will it also reach its own remarkable heights like MSTR? From both a trend and technical perspective, EVW's current performance is textbook material—breakthrough, confirmation, and upward momentum. This is the kind of trajectory a promising token should have in a bullish market. So, friends, take a moment to think: are you ready to seize this opportunity?

Perhaps you're still unsure about the potential value of tokens, my friends! Let's take a moment to revisit some of the most incredible token listing performances in history. These legendary stories not only fueled the market's enthusiasm, but also showcased the boundless opportunities within the digital asset market.

1. **BTC:** The pioneer of cryptocurrency. Its success is like the opening scene of an epic movie, igniting the entire market. In 2009, Bitcoin's price was almost negligible, but now it has become the "gold" of the digital currency market, with one Bitcoin approaching \$100,000. It hasn't just gone to the moon—it's heading straight to Mars, becoming a legendary symbol of wealth creation. As the creator of blockchain technology, Bitcoin's future remains full of boundless possibilities and excitement.

2. **ETH:** Launched in 2015 at \$0.30 per coin, Ethereum's innovative smart contract platform completely transformed the application boundaries of blockchain technology. In just a few years, Ethereum's price soared to a historic high of \$4,878, with an incredible increase of over 1,600,000%. It's nothing short of magical growth.

3. **BNB:** As the native token of Binance Exchange, BNB's initial offering was just \$0.10. Thanks to its wide range of use cases and the strong backing of Binance Exchange, it quickly became one of the fastest-growing digital assets in the industry. Its all-time high reached \$690, with an astonishing increase of over 690,000%, making it a profit-making legend that dazzles.

4. **EOS:** Launched in 2017 at \$0.90, EOS captured the market's attention with its high-performance blockchain architecture, supporting large-scale decentralized applications (DApps) and smart contracts. EOS reached an all-time high of \$15.60, an

increase of over 1,600%. While not as extreme as the previous examples, it is still a remarkable achievement worthy of applause.

These events remind us that any high-quality project has the potential for unimaginable value growth. Just like the EVW token, which is backed by a world-leading quantitative technology platform, its application potential is vast. Who can predict what historical chapter it will write in the future? As a prime example of the fusion of technology and finance, the growth of EVW is propelled by the power of knowledge and innovation.

I firmly believe that the strength of technology and knowledge can create extraordinary value. Currently, the business school is fully focused on advancing the testing of Vanguard AI 4.0—a groundbreaking, forward-looking quantitative trading system. Once fully verified and commercialized, this system will significantly enhance the market application and liquidity of EVW tokens. This pivotal step is expected to become the driving engine for the rapid rise in token value, potentially bringing the price of the token to a significant increase, with a target range of \$6 to \$8.

Additionally, to further promote Vanguard AI 4.0 and EVW Business School, we've prepared a special gift for those who actively participate in the internal testing of Vanguard AI 4.0, diligently study, and submit high-quality study notes: token rewards! This is not only a recognition of your dedication and hard work but also marks the starting point for future value growth.

Please note, the number of reward tokens is limited. By joining our Asset Multiplication Plan, you will have the exclusive opportunity to receive token rewards ahead of others.

Do you remember when Bitcoin was first introduced, its price was almost zero? Today, it has become the starting point of countless wealth legends, with its price now nearing \$100,000. Could EVW token be the next digital asset to change history? Are you ready to own it?

The EVW token is currently at a remarkable starting point—its value may exceed your imagination. However, this opportunity belongs only to those who seize the moment. If you are fortunate enough to acquire our token, treat it with care and preserve it. In the future, EVW could become the brightest gem in your investment journey!

What about BTC? Bitcoin has been rising strongly from \$65,000, reaching a high of \$99,500 today, just one step away from the round mark of \$100,000! This performance once again proves that Bitcoin is the absolute protagonist of this round of bull market. And I always believe that \$100,000 is just the starting point of the bull market! Looking back at the time when Bitcoin was around \$65,000, I strongly recommended that everyone buy Bitcoin spot many times. If you followed the advice at the time, the profit of spot holdings would have exceeded 50%; and friends who adopted contract trading or option strategies may have earned as much as 500% or more. Especially in the recent

**EVW Business**

**School**

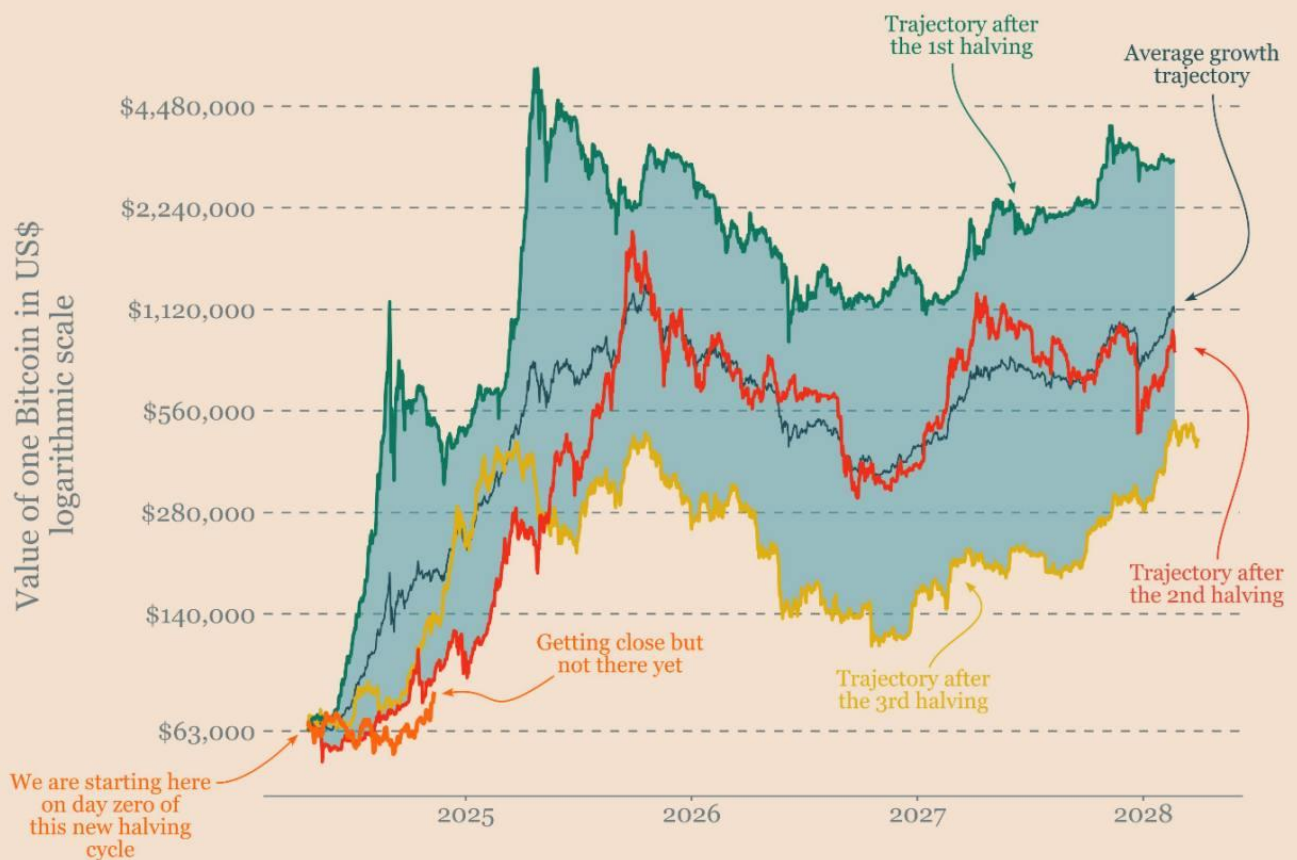

one-sided market, friends who followed the contract trading signals have achieved rich returns, which fully proves the power of trend trading.

## Bitcoin's growth trajectory after the 4th halving

What if Bitcoin's growth after the 4th halving follows the same pattern as the previous cycles?

Well assuming the same growth rate as the past three cycles we would expect one BTC to be worth anywhere between \$140,000 and \$4,500,000 per coin starting from \$63,000.

Despite the new all-time high Bitcoin is still below the historical trend.

### Technical analysis

Daily chart analysis: As shown in the chart below, BTC is still in a strong bullish trend as a whole. From the daily chart, the price is steadily rising along the MA7/12 moving average, the golden moving average system is diverging upward, and the trend is gradually strengthening, showing that the market bullish force is dominant. The MACD indicator further verifies this: DIF crosses DEA, forms a golden cross above the zero axis, and continues to diverge upward. At the same time, as prices continue to hit new highs, the volume continues to expand, further consolidating the upward trend. However, it

**EVW Business**

**School**

should be noted that the current price is close to the historic 100,000 US dollar integer mark. This key position may trigger a fierce battle between long and short sides, and a certain callback risk needs to be guarded against in the short term.

Four-hour chart analysis: As shown in the chart below, Bitcoin's trend still maintains a bullish pattern, the gold moving average system shows strong upward momentum, and the moving average system continues to diverge upward. However, in the short-term trend, there is a certain deviation in the relationship between volume and price, and the trading volume has not effectively followed the price increase. At the same time, the green volume column of the MACD indicator is shrinking, which indicates that the short-term market may face adjustment pressure. At present, it is necessary to pay close attention to the performance of the key support level of \$95,000, as well as further changes in volume and technical indicators to determine whether the adjustment will deepen.

Strategic suggestions: Bitcoin is currently at an important juncture - \$100,000. As a dual resistance at the psychological and technical levels, the competition between longs and shorts here is bound to be extremely fierce, and the market may face large fluctuations. If Bitcoin fails to successfully break through the integer mark, the possibility of a short-term correction cannot be ruled out. Therefore, I suggest that everyone remain cautious at the current stage, do not rashly trade contracts at high levels, and patiently wait for an effective breakthrough of \$100,000 before seizing the next round of rising opportunities. For friends who hold spot positions, continue to hold firmly, follow the trend, and let profits run; for friends who are waiting and watching, please pay attention to Bitcoin's performance near \$100,000, be prepared, and wait for the market to give clear signals. Opportunities belong to those who are patient, let us observe calmly and win the future with strategies! If you need real-time trading strategies, please contact the assistant in a private message as soon as possible. Today's sharing ends here, friends, have a happy weekend!
