Topics:

1. Asset Multiplication Plan—Millionaire Training Camp is about to start. Are you ready to embark on a journey of wealth with us?
2. Operational strategies in the crypto market.

Ladies and gentlemen, good afternoon! I am Michael. Today is Thanksgiving, a special day full of gratitude and reunion. I am very happy to spend this warm and beautiful holiday with you at this meaningful moment. First of all, I would like to extend my holiday greetings to everyone and express my sincerest gratitude for your support and trust. It is because of your company and encouragement that our community can grow and develop, and this trust is the greatest driving force that drives us forward!

The origin of Thanksgiving can be traced back to the early immigration period in the United States. At that time, after experiencing famine and harsh challenges, the Puritans received generous help from the indigenous people, and finally overcame the difficulties and celebrated the joy of the harvest together. This tradition continues to this day, not only becoming a symbol of reunion and gratitude, but also constantly reminding us that behind every achievement, we cannot do without the support and help of others. The meaning of Thanksgiving is to let us learn to be grateful to those who help us at critical moments, and remember every kindness and companionship on the road to growth.

Here, I would like to express my special thanks to Professor Reese, the founder of the business school. When I first embarked on the road of investment, I experienced countless failures and setbacks. I felt confused and even began to doubt my ability and direction. It was the careful guidance and advice of the professor that helped me step out of the predicament step by step. He not only helped me gradually establish a clear investment thinking and strategy, but also guided me to build my own unique trading system. Under the guidance of the professor, I transformed from an investor who had been defeated repeatedly to a successful investor today. Without the help and support of the professor, I would not be where I am today, and I would not have the opportunity to share my growth process with you here. The professor not only changed my investment path, but also taught me how to face challenges and opportunities with wisdom and action. At this moment of gratitude, I am grateful from the bottom of my heart for all the guidance and support he has given me.

Gratitude is not only an emotion, but also an action. I hope to pass on the valuable experience I learned from the professor to everyone through my sharing, so that more friends can avoid detours and achieve breakthroughs and growth on the road of investment. As my experience proves, as long as the direction is correct and efforts are unremitting, everyone can write their own brilliant chapter! Finally, thank every friend in the community again, thank you for your

EVW Business

School

support and trust, and thank you for the professor's patient teaching and guidance. May we walk hand in hand with hope on this Thanksgiving Day and welcome a better future together!

Have you signed up for the upcoming Asset Multiplication Plan—Millionaire Training Camp? Since I met the professor, I have actively participated in every training camp. For me, this is not only an opportunity to learn, but also an extraordinary journey to challenge myself and surpass my limits. These valuable experiences have greatly improved my continuous growth and breakthroughs, and my love and mastery of short-term swing trading have added many highlights and wonderful chapters to my investment journey.

Looking back, I am particularly grateful for the decision I made at the time. It was because of that brave step that I had the opportunity to come into contact with the professor's wisdom, participate in the training camp, and gain today's growth and achievements. If I hadn't been so decisive at the time, I might still be staying where I am, wandering in the confusion of investment. So, if you are still hesitating, you might as well take this step boldly—it may be the most important turning point in your investment journey!

I still remember that in the last training camp, my total return rate through stocks and options reached an astonishing 700%! This is not only a leap in wealth, but also a perfect embodiment of the correct investment strategy and resolute execution. What I am looking forward to even more is that this time we will work with Vanguard AI 4.0, a precise and stable trading signal support system. Its addition will undoubtedly inject new power into our investment strategy, helping us to deal with market fluctuations in a more scientific, calm and efficient way and amplify our profit potential. The Millionaire Training Camp of the Asset Multiplication Plan is not only an opportunity for wealth growth, but also an extraordinary journey to redefine investment thinking and tap into one's own potential. It can not only teach us how to optimize returns, but also shape our investment mentality and strategy, so that everyone can achieve a true transformation.

Therefore, I sincerely hope that every friend can seize this rare opportunity! As long as you participate in the Millionaire Training Camp, your investment ability, market vision and operational confidence will achieve a qualitative leap. Whether it is the improvement of skills, the doubling of income, or the maturity of mentality, this experience will become a meaningful part of your life. Each session of the Millionaire Training Camp of the Asset Multiplication Plan is a high-standard investment feast carefully created for each participant by the professor who devotes a lot of time and energy. Such an opportunity is rare and the value is immeasurable! In order to thank everyone for their support, as long as you sign up to join our training camp, you can receive 20 EVW tokens as a special gift. In addition, starting from this week, the use of community points has been further expanded. It can not only be used to redeem lottery codes, but also to redeem tokens. Every 100 points can be exchanged for 10 EVW tokens, providing more value-added opportunities for everyone. If you haven't signed up yet, please seize the time to lock in your place; if you have already signed up, please wait patiently. Next month, the Millionaire Training Camp of the Asset Multiplication Plan will be officially launched. Let us act together and use wisdom and hard work to open your own road to wealth!

On this special day of Thanksgiving, let us review the recent operational achievements of the

EVW Business

School

Business School. Each achievement is inseparable from the efforts of the Business School team and the strong support of Vanguard AI 4.0. With a trading signal with an accuracy rate of up to 95%, this system has led us to obtain excellent investment returns!

As shown in the chart, our targets are mainly concentrated in two core directions: AI and cryptocurrency, especially those related to the crypto market, which have performed particularly well. For example, MSTR has risen from around 210 US dollars when it was recommended to a high of 540 US dollars, achieving an astonishing 150% increase in just one month; MARA has a return of 36% and is still rising; IBIT has a return of 12.53%, also showing a continuous upward trend. The BTC spot we still hold has a profit of more than 40%+; the EVW token has a profit of more than 20%+. Looking ahead, I firmly believe that as BTC completes its correction and accumulates strength to break through the historic mark of 100,000 US dollars, the profit space of the crypto market will be further expanded, ushering in greater opportunities.

Peak Wealth Select Portfolio Plan

Purchase Date	Stock Symbol	Purchase Price	Sale Date	Sale Price	Rate of return
10/22/2024	MSTR	\$215.00	11/11/2024	\$309.50	43.95%
10/16/2024	MARA	\$17.20	11/11/2024	\$23.40	36.05%
10/22/2024	DELL	\$120.30	11/11/2024	\$139.40	15.88%
10/16/2024	GOOGL	\$163.40	11/11/2024	\$179.60	9.91%
10/22/2024	NVDA	\$142.10	/	/	Holding
10/27/2024	BTC	\$67,000.00	/	/	Holding
11/05/2024	BTC	\$69,000.00	/	/	Holding
11/06/2024	IBIT	\$42.30	11/11/2024	\$47.60	12.53%
11/13/2024	SNOW	\$126.00	11/21/2024	\$173.00	37.30%
11/20/2024	COIN	\$325.00	11/27/2024	\$310.00	-4.62%
11/26/2024	MU	\$104.00	/	/	Holding
11/26/2024	EVW	\$1.40	/	/	Holding

Of course, the performance of other targets is also quite good. For example, targets such as SNOW, DELL, and GOOGL have also brought us considerable returns, especially SNOW, which

made us an amazing profit of 30%+ the day after the financial report was released. Although COIN caused us a small loss in the short term, in the long run, I am still confident in its subsequent performance. I firmly believe that as BTC breaks through the historic mark of 100,000 US dollars, COIN will also have a high probability of a strong outbreak. In addition, MU, a new position newly opened this week, is a medium- and long-term layout target. Although it is currently affected by the short-term weakness of the semiconductor sector, the stock price is close to the lower track of the Bollinger channel. Just hold the stock patiently and wait for the sector trend to improve.

On this Thanksgiving Day, let us be grateful for the growth and gains brought by all investment opportunities. Past success is the reward of hard work and correct strategies; and future profits require wisdom, patience and persistence. Let us go hand in hand, seize every opportunity, make adequate preparations for the next stage of breakthrough, and work together to welcome more brilliant investment results!

The above profit data is undoubtedly the most powerful proof of the Vanguard AI 4.0 trading system, which is worth over 100 million US dollars! With an amazing accuracy of over 95% and super stability, this system has demonstrated unparalleled outstanding performance in the complex and ever-changing market. What is even more exciting is that Vanguard AI 4.0 is still being iterated and upgraded, and its accuracy and efficiency are becoming more powerful, bringing us more stable and rich returns!

Next week, we will start testing advanced trading strategies such as options and contracts, and I am looking forward to it! As an investor who is keen on short-term operations and good at capturing opportunities from market fluctuations, this test will be an excellent attempt. Short-term operations have always been a contest of speed and wisdom, and the intervention of Vanguard AI 4.0 will greatly improve my trading efficiency and success rate, allowing me to quickly lock in profit targets with higher accuracy and maximize short-term returns! I firmly believe that this system will inject new power into short-term trading strategies, allowing us to be at ease in the market and reap higher returns.

What's even more exciting is that after the test is completed, Vanguard AI 4.0 will be fully applied to the Asset Multiplication Plan—Millionaire Training Camp. This is not only a strategic revolution, but also an investment upgrade that subverts traditional cognition! The addition of this system will provide top-level technical support for each participant, giving them previously unimaginable trading capabilities! Whether it is accurately judging market trends or quickly capturing profit opportunities, Vanguard AI 4.0 will help everyone quickly improve their investment level, easily seize market dividends, and ultimately achieve a leap in wealth!

Yesterday, as the last full trading day in November, U.S. stocks fell across the board, and market sentiment was particularly depressed. Investors continue to focus on Trump's tariff policy and cabinet personnel composition. The Nasdaq fell 1.23% during the session, and the Nasdaq 100 index was close to a 1.5% drop. The S&P 500 ended its seven-day winning streak, and although small-cap stocks performed strongly in the morning, they almost gave up all their gains in the

EVW Business

School

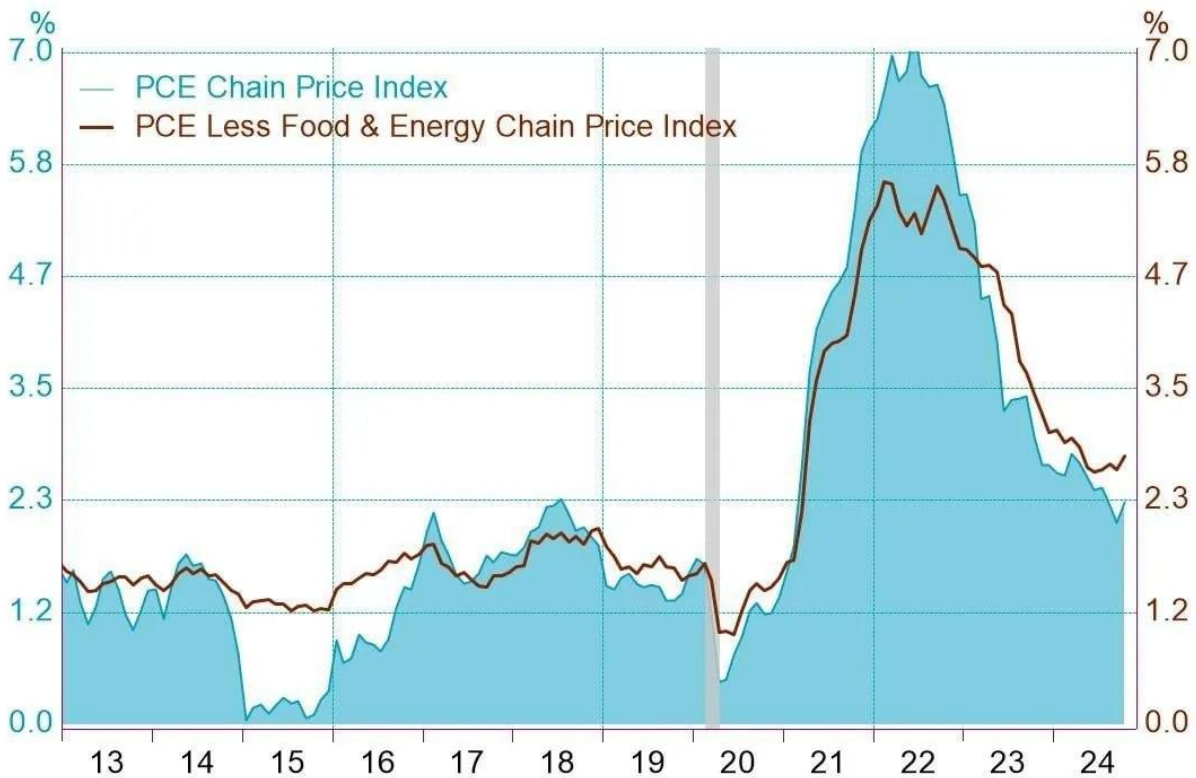

afternoon, reflecting the lack of sustained support in the market. Overall, poor earnings reports of technology stocks have become the main factor dragging down the market, and the performance of macroeconomic data has failed to effectively boost market confidence. As of the close, the Dow fell 0.31%, the S&P 500 fell 0.38%, and the Nasdaq fell 0.60%.

The weak performance of the technology and software industries has clearly dragged down the overall market trend. PC giants Dell (DELL) and HP (HPQ) fell 12.25% and 11.36% respectively due to weak demand and quarterly revenue that did not meet expectations. Dell Chief Operating Officer Jeffrey Clarke pointed out that spending in the field of artificial intelligence "will not grow linearly", a statement that dampened the market's optimistic expectations for the AI sector. In addition, the stock price of cybersecurity company CrowdStrike (CRWD) fell more than 4.5% after the release of its financial report, further exacerbating the overall pessimism in the technology industry. The combination of these factors has put pressure on the market, and short-term risk sentiment is relatively cautious. This is also one of the main reasons for Micron Technology (MU)'s sharp correction yesterday. Its stock price fell below the MA62-day moving average, and its technical form was significantly affected.

At the same time, the October core personal consumption expenditure (PCE) inflation data released on the same day failed to boost market sentiment. The data showed that the core PCE increased by 0.3% month-on-month and 2.8% year-on-year. As shown in the figure, although it is in line with market expectations, the pace of inflation decline has obviously slowed down, and there is still a significant gap from the 2% target set by the Federal Reserve. This result reinforces the market's expectation that the Federal Reserve will maintain a high interest rate policy for a long time, while increasing uncertainty about future economic growth. Investors' expectations that the Federal Reserve will maintain interest rates unchanged in December have risen to 34% from 24% last month, but there are still large variables in the future policy path, which has increased market anxiety.

PCE Chain Price Index % Y/Y SA, 2017=100

Source: Bureau of Economic Analysis/Haver Analytics

Although inflation data was mediocre, other economic indicators provided some support. The annualized GDP growth rate in the third quarter remained at 2.8%, showing that the overall economy is still resilient, while the number of first-time unemployment claims fell to 213,000, further confirming the stability of the job market. However, these positive data did not have a significant impact on the market. Instead, investors worried that "economic overheating" might delay the pace of interest rate cuts, further suppressing risk appetite.

According to Smart Investment Strategy Plan No. 4, given the strong performance of EVW, I am more optimistic about the future trend of EVW tokens compared to the pullback of MU. In just three trading days, EVW has brought about 20% profit, which is much better than MU. In sharp contrast to the pullback of MU, EVW has shown strong upward momentum after breaking through the new high. From the chart, EVW's Bollinger Bands show a clear upward trend, and the opening continues to expand, suggesting that the upward momentum is steadily accumulating. At the same time, the DIF and DEA of MACD have two consecutive golden crosses above the zero axis, indicating that the upward momentum in the short term is very strong. Compared with the previous rise of BTC, EVW currently has room for catch-up, and there is still considerable profit potential above. Therefore, friends who have not yet bought can consider entering the market, and those who have already bought can continue to hold to

EVW Business

School

welcome further room for growth.

However, what is more worthy of attention is the medium- and long-term growth potential of EVW tokens. With the continuous advancement of Vanguard AI 4.0 testing and the official launch of the commercialization process in the later stage, this powerful quantitative trading system will significantly enhance the market application and liquidity of EVW tokens, and become the core driving force for the rapid growth of its value. This key measure will continue to boost the price of EVW tokens and further broaden its growth space. The future target price is expected to reach 6 to 8 US dollars, bringing you unexpected surprises. For friends who currently hold EVW, this is not only a reflection of short-term gains, but also a rare opportunity for medium- and long-term wealth appreciation. Are you ready to welcome the arrival of EVW's doubling of profits? Take action, don't hesitate, and don't let it slip away from you quietly.

In the crypto market, Bitcoin's current price is fluctuating within the range of 90,000 to 100,000 US dollars. At this stage, the main focus is on buying low and selling high, and performing range band operations to capture short-term profits. However, once the integer mark of 100,000 US dollars is broken, the market will likely enter a unilateral market, further pushing prices up. Therefore, at this critical position, traders should pay close attention and be prepared to respond after the breakthrough. That's all for today, Happy Thanksgiving to everyone!

VANGUARD AI 4.0
