Topics:

1. The three major indexes continue to hit new highs, will the risks become greater?
2. Millionaire Training Camp—Advanced Trading Test is officially launched.
3. Technical sharing: Basic application and trading secrets of MACD.

Good morning, team! I'm Milton Reese, your old friend. First of all, I would like to express my sincere gratitude to every community member for their support. It is because of your joint efforts that we can achieve such outstanding results—the test results in November have laid a solid foundation for the next work. Now, we have entered the last month of 2024. This is not only the final stage of the comprehensive and in-depth testing of Vanguard AI 4.0, but also an important node for the Asset Multiplication Plan—Millionaire Training Camp to start the actual combat plan. This week, we will officially launch a comprehensive high-level trading test, which will be a comprehensive test of the Vanguard AI 4.0 system. As long as the accuracy of the test can be stably above 95%, it means that we have paved the way for the actual combat plan of the Millionaire Training Camp. The next stage will be the moment to witness everyone's real leap in wealth. Are you ready? I hope that in the days to come, we will still get your support as always. I also hope that through our joint efforts, we can truly lead every member of the community to achieve rapid appreciation of wealth. Let us be full of confidence and actively invest in the final sprint stage to welcome this historic and important moment together!

Friends, the exciting moment has finally arrived! I believe that we will have an exciting result soon. What kind of unprecedented experience will Vanguard AI 4.0 bring us in the advanced trading test? Let us witness and feel it together. For those who have not been selected for this plan for the time being, please don't worry. As compensation for you, for all friends who sign up for the Asset Multiplication Plan—Millionaire Training Camp, we will match you with an additional higher loss compensation amount in this week's Smart Investment Strategy Plan No. 5. Help you reduce risks and make steady profits. For specific quota matching details, please feel free to send a private message to the assistant for details. In addition, this week's Smart Investment Strategy Plan No. 5 expects a short-term conservative return of more than 30%. The number of places is limited, please contact the assistant as soon as possible to lock in the place.

At the same time, I will share with you all the details of this internal test in real time, and explain in detail the core points of Vanguard AI 4.0 in actual combat to help you understand this system more deeply and master more efficient practical methods. Compared with how many people can join this plan, I think it is more important whether this plan can be successfully achieved. Don't you think so? Because once it succeeds, it means that our choice is correct, it means that this investment portfolio market or variety is worth choosing, and it means that Vanguard AI 4.0 can help us make more money. At that time, I will definitely lead everyone to achieve rapid wealth appreciation and seize better opportunities.

Important reminder to everyone, for those who participated in the Vanguard AI 4.0 advanced trading test, hereby inform: BTC trading signals have been generated, please open your trading

**EVW Business School**

account and prepare. Soon, my assistant will send specific trading signals via Telegram. I hope you will not miss this trading opportunity, please stay tuned and participate in time. This is a good opportunity to verify our Vanguard AI 4.0. I hope everyone can make full use of this technology and seize the opportunity to maximize benefits that may arise.

As the end of 2024 approaches, the U.S. stock market has once again become the focus of Wall Street. So far this year, the S&P 500 has risen by more than 27%, and last year's increase reached 24%. The phenomenon of a two-year increase of more than 20% is extremely rare in the past 100 years. The current market has shown signs of "over-prosperity", which has raised concerns about a possible bubble burst in 2025. The S&P 500 has hit new highs recently, and the small-cap Russell 2000 index has performed particularly well in the past two weeks, almost twice the increase of the S&P 500. However, extreme market optimism is causing vigilance. The S&P 500 has set 53 new records this year, setting a new high every five days on average. This "over-optimism" has caused concerns among professionals that the market may have reached a high point of sentiment and potential risks are accumulating.

Currently, investors' risk appetite is mainly concentrated on small-cap stocks, which are considered to be "riskiest". Although some policies of the Trump administration are expected to have a positive impact on small-cap stocks, the earnings outlook for small-cap stocks is not optimistic. At the same time, the potential impact of Trump's plan on economic growth, inflation and the central bank's interest rate path is still unclear. In particular, his threat to deport illegal immigrants on a large scale and possibly trigger global trade conflicts has exacerbated market concerns about a new round of inflation risks. In addition, small companies are more sensitive to monetary policy, and the Federal Reserve has indicated that it will slow down the pace of future interest rate cuts, which may be unfavorable to the performance of small-cap stocks. At the same time, as the market's enthusiasm for AI-related things gradually cools, other potential risks have begun to emerge. Although market sentiment remains optimistic, the hidden worries behind this round of prosperity are gradually emerging, and we need to remain highly vigilant and pay attention to potential uncertainties.

What will happen in 2025 after two consecutive years of growth? Historically, such two consecutive years of growth of 20% have only occurred a few times, and the market performance in the third year after these two consecutive years of growth was different:

In 1927-1928, the S&P 500 index rose by 31% and 38% respectively, and in 1929, the market had the "famous" "Black Monday", which caused the stock market to fall by 13%, which in turn triggered the Great Depression;

In 1935-1936, the S&P 500 index rose by 42% and 28% respectively, and in 1937, the market fell into another severe recession and fell by 39%;

In 1954-1955, the S&P 500 index rose by 45% and 26% respectively, and in 1956, as the end of the long post-war bull market, the market only rose slightly by 3%.

In 1995-1996, the S&P 500 rose 34% and 20% respectively, and after 1997, the market continued to rise 31% until 2000 when it fell for three consecutive years.

In the face of the continuous record highs of the three major indexes, should we be excited or should we be more cautious? The S&P 500 has achieved an annual increase of more than 20%

**EVW Business School**

for four consecutive times, but it should be noted that two of them occurred during the historic market bubble. Even though the market continued to rise from 1997 to 1999, it was followed by the bursting of the Internet bubble, which sounded a warning to us. Data shows that the current price-to-earnings ratio of the S&P 500 is about 38 times. Although it is lower than the peak of 43 times during the Internet bubble in 1999, it is still higher than any other period in history and is comparable to the level at the end of 1998. Such valuations indicate that the market is close to its historical highs. Despite the strong performance of the stock market, this high valuation state also suggests that future investment returns may be relatively weak. In this context, investors need to stay sober and should not be carried away by the short-term market rally. More importantly, a more prudent investment strategy should be adopted at the market high to cope with potential risks that may arise.

In the current macro context, why don't we choose the US dollar, crude oil, gold or real estate as the core direction of advanced trading? The reason is clear—the trend of these assets is unclear under the dual influence of the Fed's interest rate cut path and geopolitical uncertainty. For example, the Fed's recent two interest rate cuts did not weaken the US dollar index, but instead showed a very strong reversal trend. The performance of crude oil, gold and real estate is also subject to the instability of the global situation, and their future trends lack a clear direction.

In sharp contrast, Bitcoin (BTC) is in a bull market driven by the BTC halving cycle. More and more institutions are optimistic about the future performance of BTC, and generally expect that BTC may reach \$250,000 per coin by 2025. According to current price estimates, this provides investors with a potential profit space of about 300%. The key to achieving super profits from investment is to seize the "super track" in the context of the times and concentrate resources on it.

This is exactly why I chose to focus the advanced trading test on the crypto market. Bitcoin is not

only one of the most promising assets at present, but also an investment opportunity with the largest profit margin under the unilateral deterministic trend. Take Michael Saylor as an example. His expectation that BTC will rise to \$13 million per coin in the next 20 years has made him decisively focus all his resources on buying BTC, and he plans to continue to buy \$42 billion worth of BTC in the next three years. As shown in the above figure, driven by the BTC halving cycle, I believe that the price of Bitcoin will rise to at least \$650,000 per coin. This trend is not only clear and definite, but also provides investors with huge profit margins. Compared with the uncertainty in other directions, the unilateral deterministic advantage of the crypto market is particularly prominent. Therefore, locking the advanced trading test in the crypto market is not only based on the accurate judgment of the current market environment, but also to help us seize the opportunity in the big trend and obtain the maximum return on investment. This test is not only a comprehensive verification of our strategy and system, but also an important practice towards future wealth growth! Success will mark that our choice in the super track of the crypto market is correct, and it also means that we will open up a clear path for every participant to quickly realize the rapid appreciation of wealth. This is not just a test, but also an exploration that carries hope and confidence, laying a solid foundation for infinite possibilities in the future!

So what are the direct or indirect benefits of participating in the advanced trading test of Vanguard AI 4.0? Objectively speaking, I have summarized the following points:

1. Gaining income; in the current stock market environment, due to the high overall valuation and slowing market rhythm, high-quality stocks with main rising waves like Nvidia in the first half of the year have become more scarce, and the market is more characterized by slow rises and rebounds. Under such circumstances, it is difficult to achieve a million-dollar income through the traditional market. The application of Vanguard AI 4.0 is different in the crypto market. Everyone has seen the accuracy during this period. If the trading accuracy of Vanguard AI 4.0 can also reach more than 95% in the crypto market, then the \$600 test fund is not much, but if we achieve a total asset return rate of more than 60% in the next few days, this income will be at least more than \$360 and belong to the shortlisted participants. We use time to prove it.
2. Get a good investment portfolio. Investment confidence comes from practice. Using a dual combination of stock and crypto accounts ensures no major market trends are missed. This is a happy thing. It is happening, isn't it?
3. Learn a stable profit model from it. Through today's Vanguard AI 4.0 signal trading, you can successfully make a profit from short orders today. Later, I will use technical forms to consolidate today's trading and practice. Everyone should be prepared;
4. Witness the effectiveness of a revolutionary investment tool and get it. If you can successfully make a million dollars in profit in this Asset Multiplication Plan—Millionaire Training Camp, and promise to donate 15% of the profit to the business school community fund. You will get the right to use the AI 4.0 institutional version worth 1 million per year. The personal version may be launched this year, and the first 10 friends who participate will get the right to use the AI 4.0 institutional version for half a year. There is nothing free in this community, everything needs value exchange, I hope everyone can understand that it is almost impossible to get rewards without hard work, as long as you work hard, the results will definitely be good, this is a fair world.

Here I want to emphasize two important things:

1. Friends who are not shortlisted for this test can still sign up. If I have a new plan, I will give

**EVW Business School**

priority to friends who are not selected for this plan;

2. It is recommended that you do not use your own funds to participate in our test. The reason why I only need 600,000 US dollars (1,000 people, 600 US dollars per person) to complete the first round of testing is to intentionally control the number of people. This is for risk control considerations. Although BFXCOIN Trading Center is willing to provide a lot of sponsorship funds, although I am very confident, we must always prepare for the worst. Do you understand? Just like doing transactions, we invest slowly and gradually seek opportunities to grow. This is my style of doing things. For example, what is today's transaction? What is contract trading? Do you know how this profit is generated today? Starting tomorrow, I will take time to share some investment knowledge. Next, let's consolidate the following techniques used in today's transaction.

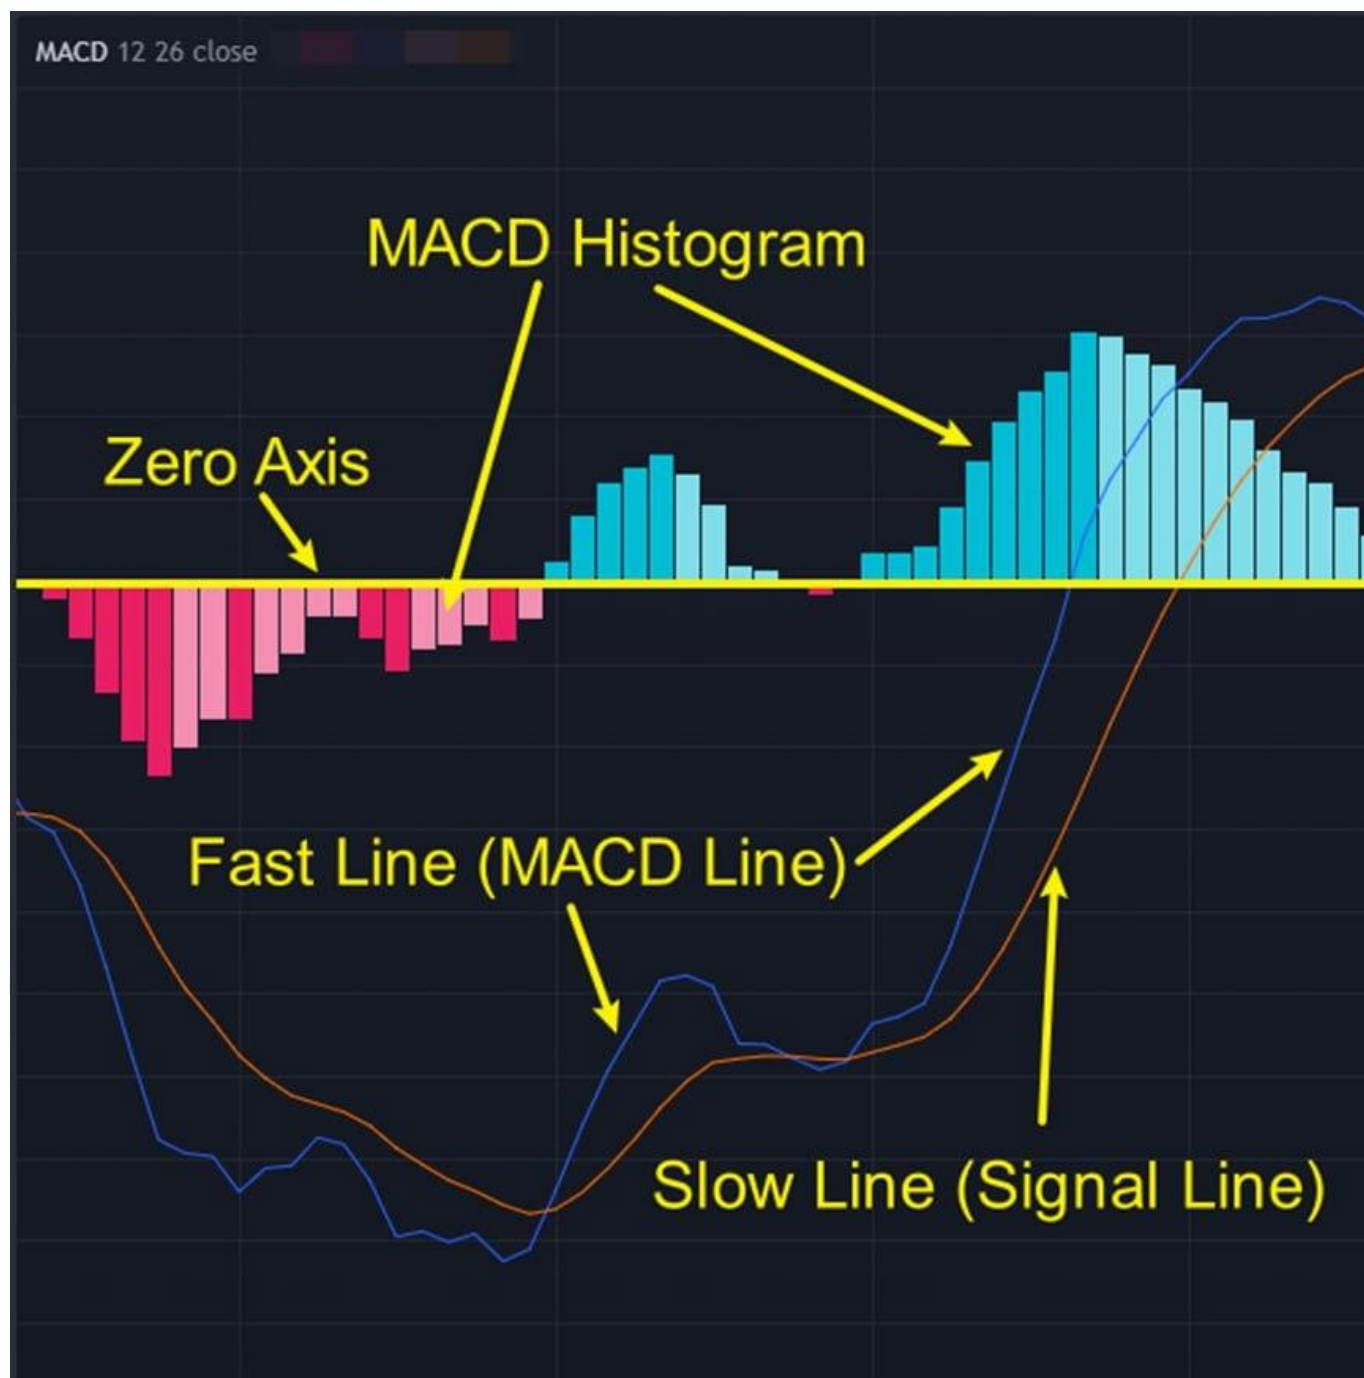

#### Technical Summary of Today's Test and Practical Trading:

1. On the 5-minute BTC chart, within the context of an overarching bullish trend, BTC underwent a substantial correction before breaking out of its consolidation zone on high volume, signaling a bullish entry opportunity. Following a retest of the trendline, another short-term buying opportunity emerged.

2. In the case of gold, the moving average system demonstrated a bullish alignment as all moving averages began trending upward. Simultaneously, the MACD indicator signaled a golden cross, with the DIF crossing above the DEA. Multiple indicators converged to produce a strong bullish signal. Vanguard AI 4.0 swiftly detected this signal and generated a trading strategy. Upon sharing this signal, the long strategy successfully delivered a return exceeding 60%.

This trading signal leveraged a combination of techniques, including the golden moving average system, consolidation breakout strategies, and MACD analysis. Have you mastered these skills?

Just now, my assistant has notified the finalists of the trading signals through the Telegram. Have you strictly followed them?

Next, let's explore new technical sharing.

Moving Average Convergence Divergence (MACD) is a moving average convergence/divergence indicator. It is a widely used technical analysis tool for judging the trend of stock or other financial asset prices and market buy and sell signals.

MACD has four components:

- Fast Line (MACD Line): Calculate the difference between the short-term (12 days) and long-term (26 days) exponential moving averages.
- Slow Line (Signal Line): Calculate the moving average of the fast line, usually 9 days.
- MACD Histogram (MACD Histogram): Draw the difference between the fast line and the slow line.
- Zero Axis: The Zero Axis is between the positive and negative values of the MACD Histogram (MACD Histogram).

Have you learned it? that's all for today, looking forward to Michael's sharing in the afternoon.

Dec. 2, 2024, EST

4:00 PM

Michael

Topics:

1. Smart Investment Strategy Plan No. 5, short-term conservative return 30%
2. What is the second internal test trading signal? What kind of return will be obtained?

Ladies and gentlemen, good afternoon! I am Michael. In the ocean of investment, market fluctuations are like surging waves: sometimes they compel us to brave the wind and waves, while at other times, they swallow us whole. Every fluctuation in the stock market reflects the ups and downs of life, much like the proverb says: "Hope deferred makes the heart sick, but a longing fulfilled is a tree of life." Each of us harbors a hidden fear of uncertainty in our hearts. When the market candlestick chart keeps fluctuating, our emotions often rise and fall with it. However, true wisdom lies in maintaining composure amidst these ups and downs and seizing genuine opportunities when they arise. Remember, "God has not given us a spirit of fear, but a spirit of power, love, and self-discipline."

Therefore, when you feel that you are being held hostage by the ups and downs of the market, you might as well take a step back and observe these fluctuations from a macro perspective. This is not just a jump in numerical values, but also the emergence of opportunities. Look for patterns in these fluctuations, and face every challenge with a calm mind and a firm heart. Standing on the stage of investment, let us not be swayed by fear, but use faith and wisdom to guide our choices. Just as Jesus said to his disciples in the storm: "Take heart, it is me, do not be afraid." Let us take this courage and determination to seize those opportunities that are ignored by others and achieve an extraordinary investment journey. Friends, the future is full of unknowns, but also full of hope. Let us find our own direction in these ups and downs, ride the wind and waves, and head towards the vaster sea! Take action now, and sail with me in the waves!

Congratulations to all the friends who participated in the Vanguard AI 4.0 advanced test this morning! The first advanced trading test achieved a return of more than 60%, which was very successful. At this important moment, I would like to emphasize that in order to ensure the smooth progress of the internal testing plan, I would like to emphasize a discipline: those who do not strictly execute trading instructions will be disqualified from the advanced trading test, and the test qualification will be replaced by more willing non-selected candidates. Friends who did not enter the program do not have to feel regretful, but should be grateful for the contributions made by the finalists to all of us. It is their participation that gives us the opportunity to witness the powerful performance of Vanguard AI 4.0 in advanced trading, feel how it provides precise support to investors, and truly verify its application value in advanced trading. This direct experience and feedback is more important than any data or description. I suggest that friends who are not selected can take the initiative to communicate with the finalists and learn from their operating experience and strategy sharing. By learning and helping each other, we can jointly improve our investment capabilities. This truly reflects the investment culture of our group "learning and sharing, happiness and freedom".

As compensation for those who were not selected, we will match you with a higher loss compensation amount in tomorrow's Smart Investment Strategy Plan No. 5 for friends who signed up for the Asset Multiplication Plan—Millionaire Training Camp. Help you reduce risks and make steady profits. In addition, tomorrow's Smart Investment Strategy Plan No. 5 expects a short-term conservative return of more than 30%, and continues to adopt the previous rules: strictly follow the disciplined operation, all profits from the transaction belong to you, and the risks are borne by us! The number of places is limited, please contact the assistant as soon as possible to lock in the opportunity.

Today, the Nasdaq and S&P 500 continued to hit new all-time highs, while the Dow Jones showed a small fluctuation pattern. The Philadelphia Semiconductor Index showed a strong rebound momentum, attracting market attention. From a technical perspective, the MACD indicator of the Philadelphia Semiconductor Index shows that the DIF line is tending to cross the DEA line upward, indicating that the market may have the momentum to rebound further in the short term. It is worth noting that the index is currently close to the key pressure level of the 60-day moving average, and the change in trading volume will become an important factor in determining whether it can break through. If this technical point can be broken through in large volume in the next few trading days, it may trigger a stronger upward trend and further consolidate the strong position of the semiconductor sector.

#### Important Tips:

Hey guys, Vanguard AI 4.0 has issued a Bitcoin trading signal. Later, the assistant will send the trading strategy to all finalists on Telegram. I hope you don't miss this trading opportunity. Please stay tuned and participate in time. Remember: only action will bring rewards. Find the assistant to confirm after the transaction.

As shown in the chart above, the investment portfolio recommendations for Smart Investment Strategy Plan No. 4 are as follows: Currently, MU is experiencing a loss of approximately 5%. While its short-term momentum appears weak, the medium-to-long-term outlook suggests a higher probability of a rebound from its box bottom. It is advisable to remain patient and continue holding, awaiting opportunities once the trend stabilizes. EVW, on the other hand, has yielded a profit of about 25%. Although it is undergoing a high-level correction, its overall uptrend remains intact. A potential buying opportunity may arise if the price retraces to the Bollinger Band's middle line in the near term. It is recommended to maintain a firm hold on EVW, as the ongoing bull market cycle in the crypto space could further amplify its profit potential. For both MU and EVW, our strategy is geared toward medium-to-long-term holdings. This approach not only supports maintaining composure amid market volatility but also maximizes the ability to capitalize on trend-driven profit opportunities. In the context of the current crypto bull market, staying the course and aligning with the prevailing trend is crucial for accelerating profit accumulation effectively.

However, through the big data analysis of Vanguard AI 4.0, it can be seen that there are not many technology stocks in the U.S. stock market that are truly driven by performance growth. Technology stocks as a whole are relatively high, and the rise of most stocks depends more on the promotion of market sentiment rather than strong support from fundamentals. Therefore, our strategy will focus on swing trading on dips. With the current high-level fluctuations of the three major indexes, swing trading is the best choice to deal with market fluctuations. It can not only avoid the risk of callbacks, but also accurately capture periodic profit opportunities. Please keep a close eye on community news to ensure that you do not miss any important trading

opportunities. Investing is like sailing on the sea. The wind direction may change at any time. Adjusting the strategy in time is the key to success. Let us rely on wisdom and patience to jointly grasp every profit band, sail elegantly in the ocean of investment, and create brilliance together!

The recent stock market sector rotation effect is quite obvious, and it is becoming more difficult to make money. In contrast, the recent performance of the crypto market is more eye-catching. As friends in the business school community, we are already aware that our operations in the crypto market have made significant profits recently. For example, we established a medium-term long position in Bitcoin at around \$67,000, and the price reached a high of \$99,800 in just one month, with considerable profits. Since the market is constantly changing, it is difficult for us to perfectly align the timing of sharing strategies with the synchronization of market fluctuations. In order to grasp the trading opportunities more accurately, we decided to adopt a real-time tracking transaction method in the upcoming Asset Multiplication Plan—Millionaire Training Camp, and guide transactions by issuing trading signals in real time to ensure that every profit opportunity can be seized. This method will greatly enhance our trading efficiency and profit potential.

Many friends asked me what they can gain by joining the Asset Multiplication Plan—Millionaire Training Camp? Some are already millionaires, is it necessary to join this training camp? No, friends, this idea is wrong. What is the purpose of our efforts? Make yourself and the people around you live better, make yourself excellent, and then you have the ability to help those in need. If you are satisfied with the status quo, it is easy to be eliminated by society. In the United States, there are too many bankrupt millionaires. A person must not be satisfied with the status quo. Joining the Asset Multiplication Plan—Millionaire Training Camp has made me a qualitative leap and successfully entered the multi-millionaire club. My next goal is to move towards the billionaire club. Although it is a bit difficult for me, I believe that as long as I work hard, there will be opportunities. The larger the funds, the more difficult it is to cross upwards. This is the law of capital. But I firmly believe that as long as you work hard, everything is possible! This is not just an investment, but also a contest with yourself. I am ready to meet the challenge, and I hope you are the same! Let us continue to break through ourselves and explore our own higher realm!

If your assets have not reached one million, you should participate in the training camp. This may be a good opportunity to change your destiny. Professor Reese is a great man, I have always believed so. The business school has always been committed to helping those who want to change their destiny through investment to succeed. He did it. I have seen many friends realize their dreams in the actual training camp. Of course, this includes myself. If you don't even have the dream of pursuing success now, then your life will be like this. Think back, is this still the self who was full of dreams for life at the beginning? Take action, friends.

At last, let me tell you that the advanced trading test of Vanguard AI 4.0 is just for everyone to test its accuracy. Do you think this is over? No, guys, the actual training behind is the real beginning. Believe me, this Asset Multiplication Plan—Millionaire Training Camp will be very exciting. Let us participate in this pleasant investment journey together!

Today's questions:

1. What technical analysis methods were used to buy Bitcoin on the 5-minute candlestick chart today?(10 points)
2. What are the four parts of MACD? Do you know how to use it?(10 points)

That's all for this afternoon's sharing. See you tomorrow, friends!
